

# TWO-WAY INTEGRATION WITH ERP SYSTEM FOR OEM MANUFACTURER

With Arcstone's integrative functionality, a leading medical OEM/OBM manufacturer gains two-way communication between their existing ERP system and job and sales order management.

## Challenges

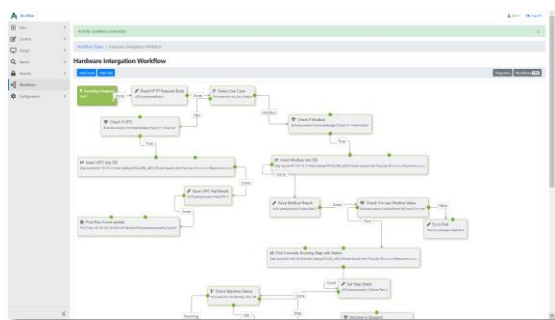

Our Client, an established OEM/OBM manufacturer, required a solution to integrate their existing ERP system (**Navision**) with their job tracking and sales order management processes. Two-way communication was required to speed up production processes.

## Our Solutions

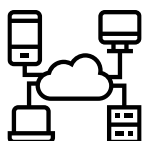

### Integrating the Tools with Existing ERP Systems

Our orchestration software module, **arcFlow™**, allows for two-way communication between existing platforms (Navision ERP) through SOAP Web Services to automatically trigger jobs for incoming sales orders and identifying customer requirements.

### Sales Order and Workflow Management

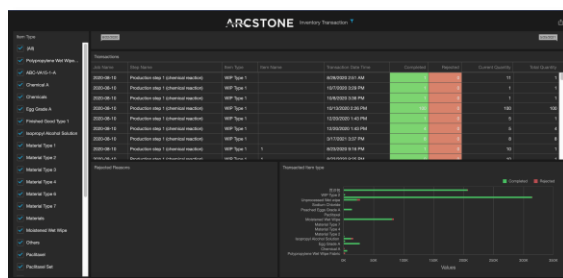

Automatically read, create and update jobs received from the Navision ERP system into Arcstone's MES, speeding up the fulfilment of sales orders, eliminating the need for additional steps in creating and updating sales orders manually.

### Inventory Integration and Tracking

Our MES integration enables two-way communication to and from the Navision ERP system, which systemically updates the consumption of materials, runtime, finished goods, etc. This allows live tracking of inventory to enhance the completion of sales orders.

## Results

With the solutions from Arcstone, the Client was able to automate their job and sales order management processes, while integrating seamlessly with their existing ERP (Navision) solution. Data pulled from the ERP allowed the client to build efficient workflows within Arcstone's MES, boosting their current processes faster than ever before.
